

Holly's Diner

BEN: Hey do you need a menu? You okay? Do you want some food? There's a wicked good vegetable soup.

BEN: Hey give me a soup.

GARY: Onion?

BEN: No vegetable. No one likes the onion. And call Marty would you?

GARY: Marty? how come?

BEN: There's some woman here who might be in trouble. She might need some help.

BEN: Here you go.

EMILY KRAMER: Thank you.

BEN: I used to love those crackers. When I was kid my mom would always get pissed at me because whenever we went out to eat I'd always eat like three packs before the food came and then I'd be stuffed.

BEN: What happened there? Not that it's any of my business. I'll leave you alone if you like.

EMILY KRAMER: I'm trying to remember. I was at Thurber's.

BEN: Hey Marty.

MARTY PITTS: I'll just have a soda. How you doing tonight? You live around here?

EMILY KRAMER: I do. I live in the area.

MARTY PITTS: Haven't seen you around.

EMILY KRAMER: I know I was born in Boston.

MARTY PITTS: Oh yeah? you were born there? So, uh, where do you live now? Where's home?

EMILY KRAMER: I don't remember. They... They did things.

MARTY PITTS: Who did things?

EMILY KRAMER: I-- I don't--i don't know. They-- They gave me a red medicine.

MARTY PITTS: Yeah? So, uh, what was the red medicine?

EMILY KRAMER: They didn't tell me.

MARTY PITTS: Okay, that's all right.

EMILY KRAMER: And, um, a blue one. There was blue. They-- They confused me. They...hurt me and--

MARTY PITTS: Ma'am, I think you should come with me.

EMILY KRAMER: No.

MARTY PITTS: I can help you.

EMILY KRAMER: No! no no no

MARTY PITTS: you're not in any trouble.

EMILY KRAMER: No stop--stop it!

MARTY PITTS: You need to talk to somebody.

EMILY KRAMER: Stop it!

MARTY PITTS: This is officer Pitts. I've got a 5150. Can you make sure that Hannah's available tonight please.

MARTY PITTS: Aah! Ben. Ben!

MARTY PITTS: I need an ambulance at the diner right away! Right now! What the hell is this?!

Holly's Diner, part 2

What?

Oh that doesn't bother you?

Are you kidding?

That man falls asleep

Counting pi to the 101st digit.

That's soothing.

Walter!

Was I humming?

I thought it was in my head.

It wasn't.

Forgive me olivia.

Nothing sings like a kilovolt.

Unique pitch.

Nothing else in nature quite like it.

I'm sure you're right.

What's up? what's on your mind?

Short fuse today I guess.

Indeed the tension in your voice

Indicates that you're carrying a heavy psychic burden.

Tortured by the depths of some--

Hey walter I think she liked it better

When you were humming.

The incident occurred approximately six hours ago.

All we've been able to determine so far

Is that they were exposed to high levels of radiation.

Emily kramer.

Last night was the first time

Anyone had seen her in two weeks

Since she was reported missing by her parents.

Police officer inside

Responded to a psych disturbance

Which would explain why we found her in handcuffs.

You think she was a runaway?

Her parents say no.

They say she was perfectly happy.

In fact she'd just been accepted

To a masters program she was excited about.

Curiously the level of radiation

Coming from emily's body

Is almost three times as great as the rest.

Are you saying that she was the source?

Don't know.

Dr. bishop any thoughts?

Yes.

Where can I get one of those white suits?

Ah! oh yeah.

There's no head.

She was sick.

Most like bellini's lymphocemia.

Striped bruising on her neck and upper arms.

You know what he's talking about?

Bellini's lymphocemia. it's an auto-immune disease.

Irreversible.

The body destroys its own muscles and organs.

Meaning it's fatal. yeah.

Though I've never seen bellini's cause a victim

To lose her head.

And what's more curious

The rash appears to be healing.

Bruises receding.

This woman seems to have been in remission.

Cured even.

How do you cure a disease that's incurable?

I haven't the slightest idea

Though I myself

Once cured this one in a dream.

Opium. fantastic stuff.

Of course I forgot it as soon as it worked out

Ugh! thanks for the warning.
121 degrees.
That's counter-indicative for a hemorrhagic tumor.
Most likely water molecules excited all at once.
He means the guy's brain was boiled.
Like a maine lobster.
I need this body and the headless one
Taken back to my lab.
Walter her disease. if there's no cure--
Well that's the question.
And one which we should pose to whoever was treating her.
Which makes three questions.
The other one being what exactly happened here?
That's only two questions.
Oh is it? oh the third question!
Um could I get some of this onion soup?
It looks delicious.
Agent dunham?
Nadim patel. pleasure to meet you.
Thank you thank you very much
For taking the trouble to talk to me.
Of course.
I've been told you have news about emily kramer.
Unfortunately I do.
Emily was found dead last night.
What? how?
I'm not at liberty to discuss that with you.
Forgive me. I'm just...
Emotional investment in patients.
It's an occupational hazard.
Her poor parents must be devastated
After everything they've already been through.
Yes and I hate troubling you about this
But we understand that emily was suffering
From a fatal disease that had recently gone into remission.
That's right.
Do you have any idea how that's possible?

Medically no.
Were you treating her
With any sort of radiation therapy?
Radiation? no. why?
The--the circumstances surrounding emily's death
Were unusual.
And it's possible that her condition
May have been a factor.
I'll get you her records if that'll help.
Yeah.
She was finally starting to live again.
Do I really need to be here?
Couldn't you just use a clamp?
Of course I could.
But I enjoy the company.
Quality time as they say.
Yeah 'cause this is just like
Throwing around the old pigskin.
What's that smell?
Hyacinth my third favorite flower.
Associated in mythology with rebirth
Which in this case is cruelly ironic.
It's coming from her?
Indeed which indicates
Either a mutation of the genetic level
Or she was eating flowers.
Perhaps her perfume.
How's it coming?
Oh olivia join us.
We've learned some things already
We don't think she ran away.
Ligature marks.
So she was being held against her will.
Either that or she had
A proclivity for sexual bondage.
Scientific observation not a judgment.
Some of my fondest memori----

Oh walter stop.
Wherever that's going is just wrong.
There's also this.
Subcutaneous injection marks.
She was being given medicine intravenously.
So whoever was holding her captive
Was giving her drugs.
Yes but not the enjoyable kind.
In fact quite unlike
Anything I've ever seen before.
You okay?
Should I be?
So how'd she end up in the diner?
Did she escape? perhaps not.
There are two distinct methods
In scientific experimentation.
Lab trials or field trials.
You're suggesting they may have let her go on purpose?
Whoever did this wanted to make sure
What they did to her was working.
So there was something inside her
That killed those people at the diner.
And her-- noggin?
I'm not sure yet.
It's a theory.
Obviously I'll be more certain
Once we identify the substance. sorry.
Or when whoever did this...
hey charlie.
Tries to repeat their results.
You mean if they take another woman.
Judging by agent dunham's body language
I'd say she's receiving that very news.
Okay.
Missing persons called in another case four hours ago.
Her name is claire williams.
She was diagnosed

With bellini's lymphocemia three years ago.
Someone's targeting people with the disease?
That or it's one hell of a coincidence.
Hey liv.
I get it.
You get what?
Young woman what was done to her.
You know this coming your way today of all days.
It's okay.
I'm okay.
Listen I know you don't like to celebrate
But happy birthday.
Ken williams?
Olivia dunham charlie francis
fbi.
Claire. did you find her?
I'm afraid we don't have new information.
But we do need to ask you a few questions.
Her name is emily kramer.
She's suffered from the same disease as your wife.
You seen her before?
Another case?
What--what happened to her?
Do you know her mr. williams?
No i-i don't think so.
We don't know anyone else with bellini's
I mean what we went through fighting claire's disease.
And the constant pain.
When the lesions started appearing
She stopped going out.
That damn disease almost took everything from us
Even our marriage.
And then... it was like a miracle.
A miracle?
She started getting better.
The pain went away.
She went into remission?

About six weeks ago.
She was herself again.
And now...
Please find my wife.
Please find her for me.
What's happening?
Please don't hurt me.
The diner was a test. this one counts.
Is she a candidate?
Even better.
Let's get started.
To understand what happened at the diner
We'll use mr. papaya.
Clear!
This is upsetting
Because he's the friendliest of fruits.
And we have goo-ification.
Is that the scientific term?
Wait.
The show's not over yet.
Is that what you think happened to the people in the diner?
That beam emits high energy microwaves
Which cause mr. papaya's molecules
To vibrate rapidly
Causing friction and producing heat.
It's like how a microwave oven cooks food.
Only in emily kramer's case she was the oven.
But then what killed emily?
This demonstration is far more effective with living tissue.
I have some expendable gerbils in the back. no.
Oh it's no trouble. I'm sure you'd like it.
Walter just drop it.
Wait am I missing something?
How is it that emily is um cooking people?
In her blood I found traces of radioactive isotopes.
Strontium 90.
I believe that these microscopic capsules

Are designed to release
Just the right amount of radiation at specific times
To cure her disease.
So you think these capsules saved her life.
Think of it like time-released chemotherapy.
Oh yes but in emily's case
The cure also made her a perfect candidate
For weaponization.
Whatever was injected into her bloodstream
Caused these capsules to burst all at once
Sending out a microwave blast
And perhaps given her own head
Was the source of energy--kaboom.
So emily's rheumatologist dr. patel
Would he have access to these sorts of isotopes?
It's doubtful.
They only use them in a couple of therapies
And they're really strictly regulated.
Why?
You think patel had something to do with this?
I don't know.
But 83% of kidnap victims
Are abducted by someone they know.
I'm gonna go and talk to emily kramer's parents.
I'll come with you.
Oh peter!
If you're going out
Could you bring me back some cotton candy?
Cotton candy. yep.
Blue not pink.
I've had a craving.
Must be the hyacinths.
Lovely blue flowers.
You're probably way ahead of me on this already
But I'm noticing certain uncomfortable similarities
Between this and some of the other incidents
We've been covering lately.

More humans are being used as guinea pigs.
My points is if this is part of the pattern
What if these people aren't just experiments?
What if somebody is preparing for something?
Maybe we should come back later.
Before or after they do to claire williams
What they did to emily kramer?
Olivia this is a wake.
These people are mourning their child.
No.
Don't you need a warrant for this?
Hey olivia stop!
Okay crashing a wake is bad enough
But rifling through a dead girl's things?
It's the only hope of finding a solid lead
So please help me.
What is it that we're looking for?
Anything any connection she may have had--
What are you doing in here?
Who are you?
What are you doing in my daughter's room?
Mrs. kramer we're terribly sorry about your loss.
We're with the fbi.
Fbi? today? you come here today?
Mrs. kramer please listen to me.
Another girl's life is at stake.
What do you mean? what other girl?
Her name is claire williams. claire?
What's happened to claire?
You know her?
A therapist told her to write through
The pain and the alienation that she felt.
It was all she had until the treatments.
The treatments? for her bellini's.
Emily and claire both had the disease.
That's how they met. here.
They became such good friends.

Why'd you lie to me mr. williams?
We met emily at the hospital
Waiting for blood tests.
She and claire started talking
Sharing horror stories about their disease.
They became friends.
One night over dinner the conversation turned
To how the medical establishment
Had abandoned us.
See, there's only 3,000 people in this country
who suffer from Bellini's.
Not enough for the drug companies to make a profit.
So they're not looking into developing a cure.
And we started talking to some other people we met
who also had the disease.
A Microbiologist, an Investment Banker,
the mother of a professional Athlete.
Started thinking about what we could do
If we pooled our resources.
So Claire and Emily were treating themselves.
We didn't have a choice.
We were desperate.
We tried radical therapies normal doctors wouldn't touch.
Three months ago we found a cure.
Time-released radioactive capsules.
Yeah.
I don't understand, why lie?
Because the people we love are depending on it.
I couldn't take the chance you'd stop that.
Claire wouldn't want that.
It's what gave us our lives back.
Mr. Williams, we will need
the names of the other patients involved.
I could give you some, but I don't know all of them.
You'll have to ask Dr. Nadim Patel.
Emily's doctor.
He knew this was going on?

He cared enough to help us.
The medication. Do you have a sample?
Is that my... Bellini's medication?
Just...tell me what you're doing.
Please just tell me what you're doing to me.
We know all about your disease, Claire.
We know that this...
makes you better.
But this...
This will make you special.
I'm so tired.
What is this?
When I told you there were unusual circumstances
surrounding Emily's death.
These were the circumstances.
I don't understand.
We know how it worked, Dr. Patel.
Ken Williams told us everything.
What we don't know is who else was involved.
I'm not responsible for this, not this.
-All I do is give them updates. -Who's they?
-Who's they? -Intrepus.
-The drug company? -You should just walk away.
You have no idea who you're dealing with
what they're capable of.
I need a name, Dr. Patel.
Dr. Patel?
Dr. Patel.
-Drop it! -I swear, it was only supposed to be updates.
Dr. Patel, put the gun on the ground now.
I'm a doctor, a healer. Do you want a name?
David Esterbrook.
No!
I found him.
David Esterbrook.
He heads up Intrepus
Pharmaceutical research division.

By all accounts, he's solely responsible
for a guns blazing congressional lobbying campaign
That allowed Intrepus to dig into
some of their more controversial R&D.
Define controversial.
Prenatal gene therapy.
Human-animal hybridization studies.
Viral warfare.
All the fun stuff.
He's in Manhattan today.
He's speaking on a humanitarian aide forum.
Listen, Liv.
Even if the doctor was right
Even if Esterbrook had something to do with
what happened to those women.
I'm gonna go out on a limb.
I'm gonna say he's not gonna confess.
I want to see it in his eyes, Charlie.
I need to know it's him.
Mr. Esterbrook?
Sorry to interrupt. Amanda Bennet, Baxil.
Listen, with the risk of sounding sycophantic
I've followed your work since Yale.
Three degrees
Including a PH.D in Medicinal Neurobiology.
I couldn't even get through biochem
without cheating off my roommate.
I'm sorry.
This must sound insanely naive to you.
No, hardly.
Science and technology has reached a point
where our means are finally catching up
with our imaginations.
And the only thing preventing us
from doing truly visionary work
are these moral-based restrictions
that lawmakers put up

in the name of public policy.
That and money.
We always need more money.
I'm gonna let you in on a little secret, Amanda.
It isn't about the money.
It is about the resolve.
I haven't been entirely honest with you.
I don't work for Baxil
But I know a colleague of yours.
Dr. Nadim Patel.
How is Nadim these days?
These days? Dead.
I'm sorry to hear that.
Not as sorry as I was to watch it happen.
Identify theft is a federal crime, Amanda.
So is kidnapping and murder. And it's agent Dunham.
Tell me what did you hope
to get out of this conversation?
I already got it.
How old are you?
28? 29?
You're an attractive young woman.
I'm sure you want to start a family one day.
It would be a shame if anything got in your way.
Broyles.
When?
Dunham.
Hey.
I understand you paid a little visit
to David Esterbrook.
News travels fast.
I was just about to type up the report
In public in a hotel bar.
I didn't realize my interview techniques
Were under such close scrutiny.
Everything we do is under close scrutiny.
This task force that you're now part of

At best it's... controversial.
We need to be perfect.
Trying to intimidate such a high profile suspect
In a murder investigation is reckless at best.
Claire williams is a prisoner right now
Having god know what injected into her body.
And david esterbrook knows where she is.
He's guilty
And he just assumes he'll get away with it.
So excuse me but right now
I couldn't give a damn about politics.
Which is exactly your problem and now mine.
You think you're the only one
Who wants to find claire williams?
You violated the cardinal law of our profession.
You let your feelings drive your decision making.
And as a result you've endangered
Not only claire williams' life
But everything we're trying to do here.
If I can't trust you to control your own passion dunham
Then I can't trust you.
Is that clear?
You'll have my report
On the esterbrook interview within the hour.
I'll be waiting.
Is there anything else you'd like me to run past you?
Not anything.
Everything.
How's it going?
She's almost ready.
And the capsules in her blood stream.
They can be triggered remotely?
Everything's as requested.
She'll be stable and ready for transport by morning.
I'll call the client and schedule delivery.
Well done
What's happening to me?

How's it going?

It's great.

Esterbrook's our only lead

To where they're holding Claire Williams

And I can't get to him.

I mean the guy's cleaner than snow.

Not even as much as an unpaid parking ticket.

I think we actually might be making some progress.

Couple minutes ago Walter thought he might have

Isolated the compound that's in Emily Kramer's blood

But then he got distracted

By the unicorn running through the lab.

Funny.

Anything else?

Got any more jokes?

All right something's been bugging you all day.

Something other than Claire Williams.

And that's okay. You know what?

We're all allowed to have our bad days.

What's not fine is blaming it on me.

I want to find her just as much as you do.

You're right. I'm sorry.

I...

I'm sorry.

Fine.

I had a stepfather.

And when he drank he'd accuse my mom

Of seeing other men and then he'd hit her.

And she just lived with it.

She never called the police not once.

Then one day he beat her really bad

And broke her nose.

I was nine.

Stormed out of the house

Got in his car drove off.

My mom's crying and I can't help her.

And then I hear his car.

He's turned back around.
He kept a gun in the drawer near his bed.
When he opened the door I pulled the trigger.
Then I pulled it again.
And I can still see his face
Almost daring me to finish.
But I couldn't.
So...they took him to the hospital
And said that he couldn't be saved
But he didn't die.
He recovered.
Then one night he just slipped away.
We never saw him again.
And I still blame myself because I should've done it.
I should've killed him.
And I know that rationally
He is not responsible for all the bad things in the world
But he is responsible for some of them.
And every year he sends me a card on my birthday
Just to let me know...
That he's still out there.
It's your birthday today.
No man is untouchable olivia.
If you really want esterbrook
All you have to do is talk to your friend nina sharp.
Massive dynamic has three separate Pharmaceutical divisions.
They're in direct competition with intrepus.
They're annual budget for corporate espionage
Could feed a mid-size nation.
I guarantee you she has something on david esterbrook.
-but even if you're right I can't go to her -why not?
Because despite their annual budget
Corporate espionage is wildly illegal.
You really think that she'd admit that to me?
It's here somewhere. I know it is.
I just have to look harder.
I'm going out.

Okay.

peter!

To be honest I didn't even know you were here.

Thank you.

Excuse me. ms.sharp.

I'm peter

Peter bishop. walter bishop's son.

You're not the only one who's done their homework.

What can I do for you mr. bishop?

I was hoping I could take a moment of your time.

Does ms. dunham know you're here?

No no she doesn't know I'm here.

Well peter

Suppose we take a walk.

You're suggesting that intrepus is conducting

Illegal drug trials with human beings.

That is a rather bold claim to make mr. bishop.

How are you able to substantiate

Your information?

Would you put it past them?

Let's assume for a second that what I'm saying is true.

Hmm. where would they do it?

They wouldn't risk using

One of their own testing facilities.

It'd have to be some place off the grid.

You know you still look just the same

As you did when you were a child.

Oh I doubt you'll remember

But you and I spent a good deal of time together.

Some of it right here.

Your father and I were quite close

When we were both much younger.

Now I have all kinds of information peter

And some of it does me no good.

We'll take the aymara people for instance of central peru.

I know that the soil beneath their land

Houses a naturally occurring metal alloy

That is potentially hyperconductive.
I also know that you have managed
To successfully conduct business with these
And other tribal concerns in parts of the world
Traditionally resistant to development.
I'm sorry ms. sharp.
I think i'm about to miss your question.
My question is.
Are you willing to make a bargain.
I give you exact application you want and then exchange
I'll get to come to you someday
And you return favor.
No questions asked.
Do we have a deal?
Do you smell that?
Yes and next time how about a little warning?
Oh not that.
Methyleugenol.
The chemical responsible
For giving hyacinths their aroma.
What about it?
I have been trying to determine
What caused the radioactive capsules
In emily kramer's bloodstream to burst at once.
This is it asterisk.
Astrid. her name is astrid.
I've got it peter. methyleugenol is the key!
That's what they injected her with.
That's why these women were chosen.
By itself harmless but given their treatments--
Causing all the capsules to burst at once.
They made her radioactive.
They turned her into a weapon.
It will be a decidedly blue compound
And now that i--
No...yes...yes!
That's it. a bonding agent.

That will work.
That will interfere with the process.
How long?
How long will it take to make the cure?
Oh not long at all now that I know.
Where's olivia?
When did this happen?
When did this become the world we live in?
Patel esterbrook.
These are the people we trust to take care of us.
5620 stapleton avenue.
The facility where claire williams is being held.
How could you possibly--
Radioactive isotopes have a heat signature
That's visible to spy satellites.
I had a friend track it down
Through the national reconnaissance office.
You have a friend at the nro.
I have a friend who's cracked their control systems.
Peter if I pull the trigger on this
And the information's bad--
It's good.
It's good.
Charlie I've got a solid lead.
A strike team. full tactical.
How we doing? almost there.
No we're sure. this is the one.
We've got a visible heat signature from the isotopes.
Visible heat signature?
Radioactive isotopes don't give off--
Walter walter stay focused.
How we doing?
Oh uh um olivia
This is the antidote.
Okay charlie we're coming now.
Listen to me.
You must inject this directly into her bloodstream.

In the jugular preferably. okay.
Facility's located
On the southern edge of framingham.
Surveillance teams reported
Armed security on the premises.
We're expecting resistance
So this will be a tactical entry.
Our main objective
Is securing the victim claire williams.
Judging from the layout
It's likely she's being held at the basement level.
We'll enter through the northwest of the building.
Alpha team will enter through the front
Clear out the west of the building.
Bravo team will clear the lower levels.
Are we clear?
Then let's make this happen.
Fbi you're under arrest.
Get down now!
Hands behind your head.
Room is clear.
I need one I need one I need one!
Look out!
Man down!
We have a man down. we need immediately medevac.
Call it in.
Stay with him.
Level's secure. we've got a few in custody.
Any sign of claire? no.
I'm going down. watch yourself.
Step away from that please.
Where is she? where's claire williams?
Agent dunham you can't go in that room.
The radiation it'll kill us all.
Claire! claire!
Claire my name's olivia dunham.
I'm with the fbi.

I know you're scared but I need you to listen to me.

I need you to come to the door.

I can't come in there.

My hea..it hurts.

That's medicine.

I need you to come to the door and take it.

I can't come in there. aah!

Claire!

Claire look at me! that's good.

Now come to the door. keep coming.

I need you to take the syringe.

I'm gonna tell you what to do.

Good. good claire.

Claire!

Look at me claire!

Claire I'm right here with you.

Claire!

Claire you need to jab yourself

In your jugular on the side of your neck.

Oh my god. my head!

Claire! claire!

Claire do it! you can do this.

Claire just do it. I know you can do it.

Stab it in. aah!

Agent dunham.

Apparently I didn't make my point clearly enough.

I thought you'd be interested to know

That claire williams is safe.

Can't say I'm familiar with that name.

That's odd.

Because an employee of yours elizabeth sarnoff

Just admitted that you supplied her

With the facility and the equipment

To make emily kramer and ms. williams

Into human weapons.

A disgruntled former employee

Will say just about anything

To vilify the boss that fired her.
Then you won't mind coming with me
To answer some questions.
Do you honestly see this going anywhere agent dunham?
I have a law firm on retainer
That charges more by the hour
Than you make in an entire year.
Then I suggest you get them to meet you at the fbi.
I guess I will include police harassment
In the litany of charges that I will file against you.
I'm still gonna walk you out that door in handcuffs
For resisting questioning.
So the press that I tipped off
Can splash your picture all over the news.
You may not answer to me
Or the federal government
But you do answer to a board of directors.
And I wonder what their response will be
When they have their company dragged
Into the middle of a murder investigation.
I guess by now you've heard.
That you frog marched a senior officer
Of a multibillion dollar conglomerate out of his office?
Yeah I heard.
Quite a few cameras there.
The press.
They always get their pound of flesh.
I understand that you think I acted too emotionally.
And putting aside the fact
That men always say that about women they work with
I'll get straight to the point.
I am emotional. I do bring it into my work.
It's what motivates me.
It helps me to get into the headspace
Of our victims
See what they've seen.
Even if I don't want to. even if it horrifies me.

And I think it makes me a better agent.
If you have a problem with that sorry.
You can fire me.
But I hope you don't.
You're not getting off that easy agent dunham.
I'll see you in the morning.
Today as the spike in the price of oil
Again sent tremors through the financial markets
But for pure shock value
Nothing beats today's very public detainment
On intrepus' david esterbrook by the fbi.
Intrepus stock is being absolutely pummeled
In overnight trading
And analysts predict it will open
At \$23 a share.
That's a ten-year low.
Which of course is very good news
For intrepus' competitors
Most notably massive dynamic.
Shares of md are up almost 12%
As investors flee
To the most reliable brand in the sector.
Hey. olivia!
Did you lock yourself out again?
Actually walter this is our hotel.
I need to talk to you.
Sure.
I'll see you upstairs okay?
It's nice to see you.
Good night walter.
And remember tonight please
The red toothbrush is mine.
White for walter.
That's me. right?
Yes.
Everything okay?
I know where you got your information.

About claire williams.

What was her price?

What did nina sharp want in return?

Nothing untoward if that's what you're worried about.

Peter.

You don't have to worry about me.

I'm a big boy. I can take care of myself.

You've been looking out for me

So I'm just returning the favor.

Thank you.

There was no letter today was there?

No.

Happy birthday.

You better get back upstairs

Before walter falls asleep in your bed.

Yeah.

He has actually done that before.

While I was sleeping.

Really not something you want to wake up to.

Good night.

Good night.
